

# MATERIAL HANDLING

- Pipes and bends
- Vacuum and compressed air conveying
- Day bins, containers, silos
- Coupling stations
- Moulded parts
- Conveyers and pre-filters
- Hoses and suction lances
- Material and vacuum systems
- Planning, installation, commissioning
- Material in aluminium and stainless steel

Regarding **material handling**, we offer an extensive range of services and components. In addition, we plan material and vacuum systems and install these together with our partners.

With a well-thought-out design and use of the latest technologies, we can achieve significant

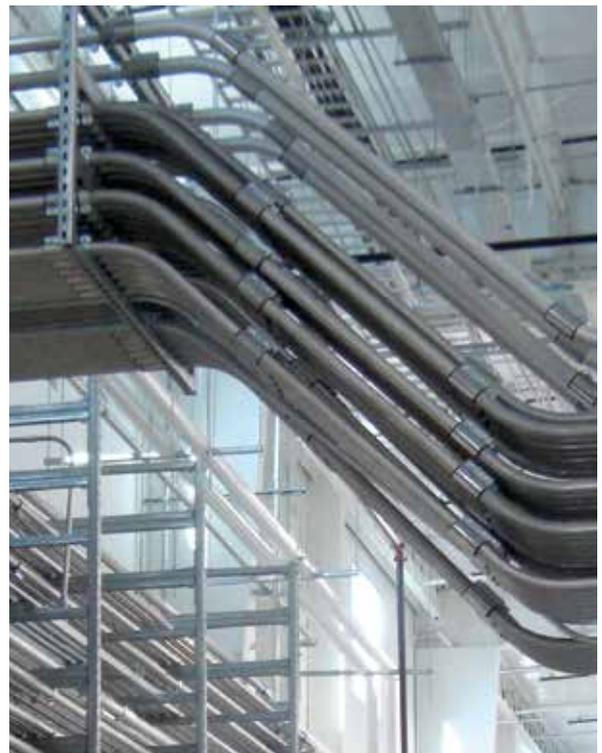

improvements in material conveying and save energy. Existing pipe systems often limit the material flow due to "grown" structures, and cause the creation of angel hair.

We would be happy to advise you on this topic.
